FOLDER/INSERTER SYSTEMS

M5000

Process Sophisticated
Mailings Faster and
More Efficiently

HASLER
America's better choice.®

THE M5000 IS THE SOLUTION TO ALL YOUR MAILING HEADACHES

If you dread the prospect of performing another tedious mailing project by hand, the cost of outsourcing, or wrestling with a bulky, noisy and difficult mailing machine, your worries are over. Hasler's M5000 Folder/Inserter enables you to do it all in-house – quickly, easily, accurately and efficiently, while saving money.

Collate, fold, insert and seal up to six inserts in one pass

This highly versatile, automatic folder/inserter system boosts productivity by enabling busy offices to process peak mailings at a rate of 3,500 filled envelopes per hour. The M5000 folds, inserts and seals documents up to eight pages, stapled or loose, so you can automate all your mailings, including letters, checks, cards, invoices, statements, marketing materials – even pre-folded flyers!

High capacity output conveyor to handle your finished envelopes.

Extend your profits with the M5000!

PowerFold technology for creative applications

The M5000 can collate up to eight pages of varying sizes in any order and single-fold the entire set to fit neatly into an envelope for a clean, coordinated presentation. Folds include standard letter, single, Z and double parallel.

Modular design offers maximum flexibility

Three multi-functional feeder stations each handle cards and documents up to 14" in length. Different feeder combinations can be used for ultimate flexibility.

There's even a special feeder that can also be set up to accommodate various items like glossy and thin stock. For greater production output, the optional high capacity BRE/MaxiFeeder can be added to hold up to 325 Business Reply Envelopes (BRE), Business Reply Cards (BRC) or other short inserts. And switching applications is easy, which makes the M5000 suitable for a variety of runs.

- **Easy to use** - fast, smooth adjustment for different sizes and fold configurations
- **Compact & quiet** - clam shell design allows for easy access and fits unobtrusively in any office environment
- **Versatile** - handles various sizes, both coated and glossy paper stocks, as well as daily mail applications
- **High productivity** - processes 3,500 filled envelopes per hour – among the highest in its class!
- **Programmable** - program up to 20 different jobs
- **Large capacity** - three feed trays each holding up to 325 pieces – nearly twice the competition!
- **Block loading** - no user setup required
- **Individual tracking** - jobs are tracked piece by piece
- **Application security** - OMR reading capability ensures sensitive jobs like payroll and statements are processed error free

Continuous processing for larger runs

The M5000 allows cascade production feeding so the next feeder tray starts when the prior one runs out. This feature enables you to load up to 975 pieces at once. And you can reload empty feeders on the fly without interrupting the job!

Incredibly easy to operate – just "Fill and Start"

For occasional applications or non-trained users, the "Fill and Start" feature allows you to simply load your documents and envelopes and initiate the job. The M5000 will automatically calculate the size of the documents and set the correct fold.

Operation for the whole system is monitored from a single screen and all settings are done from the control panel. Up to 20 jobs can be stored and recalled at the touch of a button for repetitive applications. Easy-to-read color touch screen display prompts your operator and helps reduce errors.

Optical Mark Recognition (OMR) and IntelliRead™ software options ensure correct collation

Hasler's optional Optical Mark Recognition software allows the folder/inserter to process sensitive jobs with varying numbers of pages easily and accurately.

Hasler's unique IntelliRead™ software option enables the printer to generate the OMR marks necessary to perform these mailings.

The combination of these state-of-the-art features prevents you from sending personalized documents to the wrong addressee.

Double Document Detection (DDD) system guarantees mail integrity

All M5000 document feeders are equipped with an automatic Double Document Detection (DDD) system that ensures the correct number of inserts is fed from each feeder. State-of-the-art electromechanical sensors measure actual material thickness rather than paper density using light. This technology provides

superior accuracy regardless of paper dust, the color, or thickness of paper.

QUICK AND EASY ACCESS...THE GENUINE CLAMSHELL DESIGN GIVES YOU QUICK, SAFE AND SIMPLE ACCESS INTO THE INSERT AREA.

M5000 SPECIFICATIONS

Machine specifications

Electrical: 120V, 60Hz
Width: 18"
Height: 26"
