# Smart Track®

## LOGGING INBOUND PARCELS BY HAND IS EXTREMELY INEFFICIENT

Manual logging of incoming parcels is not only time consuming, labor intensive and prone to errors, it is difficult to manage because sharing information becomes a complicated task. Hasler's Smart Track makes internal tracking hassles a thing of the past.

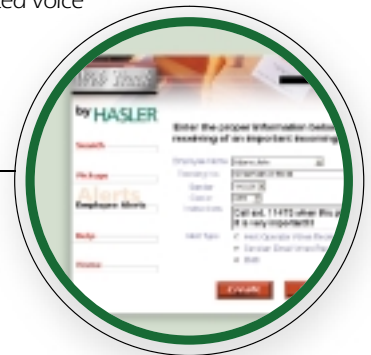

### Don't waste another minute tracking a lost parcel, package or item

Nothing interrupts your busy day like trying to locate a lost item. Everything stops until that item is found. Studies indicate that it takes an average of twenty minutes to find one missing item. And more often than not, you find it right where it was supposed to be. There was just no record that it was delivered or received. That can never happen with Smart Track. Every package, parcel or item is tracked from the time it reaches your door to the time it reaches the appropriate recipient – and every point in between.

### Advanced technology makes tracking simple

Using SQL database technology, you can link offices in the same building, across town, or across the country! Smart Track's patented voice recognition software and signature capture technology makes tracking and locating incoming shipments foolproof. And our updated voice engine works with any company database.

Web-based Alert Screens allow you to enter criteria for alerts based on the way you run your business.

### Track people or any item, anywhere, at any time

Hasler's Smart Track monitors the movement and can pinpoint the location of any item or entity – in real time! At any given moment you can identify an item's present location, who is in possession, and how long it's been there – all from your desktop. And you'll automatically receive delivery confirmation via email when the item reaches its final destination.

### Concerned about security?

With Hasler's Visitor Log In Module, you can monitor the location of an individual, the time they arrive, who they visit, how long they stay and when they depart. The visitor module can even print a report so that, in the event of an emergency, you can immediately identify who is in the building.

### Smart Track includes many useful utilities

**Screen Designer** – enables you to customize screens, add company logos and more without the help of a programmer.

**Label Designer** – allows you to make your own tracking labels and name tags, as well as add your own pickup notices.

#### Asset Tracking

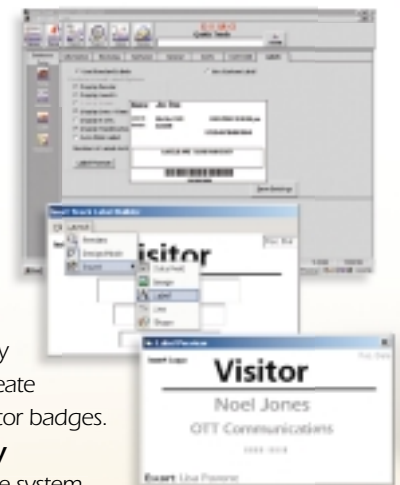

**Module** – allows you to create labels to identify inventory items.

#### Camera and Graphical

**Interface** – enables users to attach graphics to records in the system so you can document damage or tampering, include a map for delivery instructions, and even create employee photo and visitor badges.

#### Receiving and Delivery

**Device** – makes the entire system portable, so dock receiving is as easy as using the PC at your desk.

Customize screens and labels to meet your needs.

## SMART TRACK IS EASY TO LEARN AND EASY TO USE

Automated functions require fewer keystrokes and clear, bright, intuitive screens make Smart Track easy to train and easy to use. Your employees can triple their productivity in as little as ten minutes!

### HERE'S HOW IT WORKS

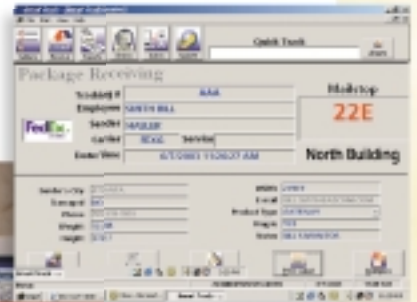

#### 1. Scanned Entry

The wireless receiving scanner logs your carrier and delivery date into the system.

#### 2. Recipient ID

Your operator speaks the recipient's name, the receiving screen identifies recipient and sets up delivery routing.

#### 3. Signature Capture

A signature capture device or signature pad enables delivery verification.

White-on-black signature is difficult to duplicate or convert and is encrypted for optimal security.

#### 4. Desktop Tracking

With its 100% browser-based module, Smart Track allows delivery searches and pickups to be performed, and alerts to be scheduled, right from the desktop.

The recipient's signature will appear right on the user's screen!

## SMART TRACK IS AVAILABLE IN SCALABLE OPTIONS TO MEET YOUR NEEDS

Hasler offers versions to suit any organization's needs and budget.

### Express

- Software only
- Scalable
- Carrier logo display
- Company tree

### Enterprise / Express version plus:

- Voice recognition
- Signature capture
- Custom screens
- Custom forms
- Employee alerts via e-mail

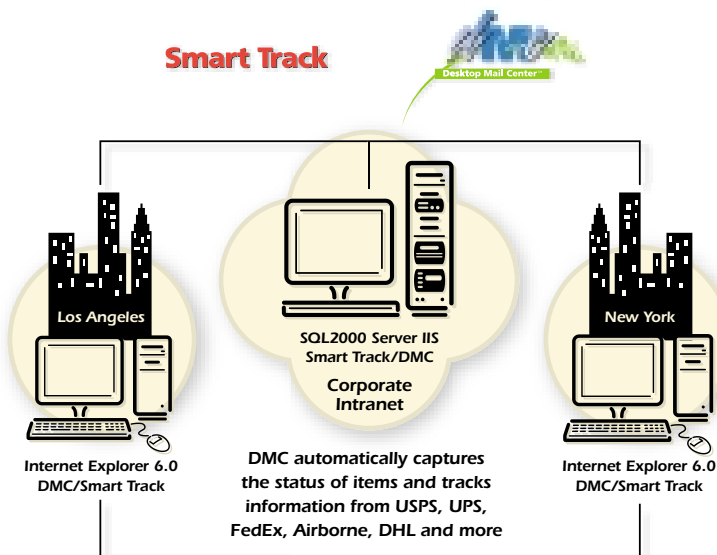

### Ultra / Enterprise version plus:

- SQL database technology
- ODBC linking to host databases
- Custom labels and reports
- Background import
- Web-tracking module
- Automated database importing
- Network up to 9,999 workstations

**Improve your efficiency and never  
lose track of another incoming delivery!**

### Complete end-to-end solution

With Smart Track, you can track inbound shipments within your organization. Combine Smart Track with Hasler's Desktop Mail Center (DMC) and you can extend the tracking capabilities beyond the four walls...from originator to carrier to destination.

#### At The Shipping End

Using DMC, the desktop user selects a carrier and ships their item. DMC automatically sends a message to Smart Track requesting a pickup. Smart Track then tracks the actual pickup time and captures an electronic signature. DMC tracks when the item is received at the shipping station and when it is actually shipped out.

#### At The Receiving End

Smart Track tracks when the item is validated at the dock, received and routed, and en route. It also captures the exact time of delivery, the name of the person who receives it, and a secure electronic signature from the recipient.
